Technical Translation · AI Utilization · PowerPoint Material Design

Technical documents, specialist translation, and PowerPoint materials — delivered to a high standard through AI and subject-matter expertise.

I have worked for many years in quality assurance and technical support, and in Japanese–English and English–Japanese technical translation, mainly in the electrical and telecommunications fields. I have handled a large number of highly specialized documents, including technical documents for hydroelectric power generation equipment, quality assurance documents, and ISO 9001-related documents.

Today I apply that experience to AI-assisted technical writing, PowerPoint material design, and the production of educational and training materials.

Why Choose Me

My strength lies not in AI itself, but in being able to apply AI on top of genuine specialist knowledge.

Drawing on years of experience translating technical documents, I produce deliverables that prioritize terminology consistency, logical structure, and quality.

- ✓ Accurate output grounded in technical understanding
- ✓ Efficient, high-quality deliverables produced with AI
- ✓ End-to-end support, from technical translation through to PowerPoint material design
- ✓ Proven track record with highly specialized documents such as ISO 9001
- ✓ Careful requirements gathering and consistent communication

Beyond general writing, I specialize in creating and translating technical documents, quality assurance documents, and educational and training materials that require specialist knowledge. AI output is also reviewed and refined on the basis of that expertise, so the deliverables I provide emphasize accuracy, logical consistency, and quality.

Services Available

- Technical translation (English→Japanese, Japanese→English)
- Technical document writing
- ISO 9001-related documents
- AI-assisted material creation
- PowerPoint material production
- PowerPoint template production
- Prompt design
- AI image generation

Key Achievements

Technical Translation

English–Japanese and Japanese–English translation of technical documents produced by hydroelectric power equipment manufacturers, including:

- Installation procedure manuals
- Commissioning (test operation) procedure manuals
- Quality assurance documents
- Inspection guidelines
- Technical specifications

PowerPoint

Planned and designed presentation templates combining AI-generated backgrounds with PowerPoint slide masters. Produced 3 themes × 5 layouts (15 layouts in total) and sold them as digital products on Gumroad.

AI Utilization

- Technical document creation using ChatGPT, Claude, and Gemini
- AI-assisted PowerPoint materials and template production
- Template development combining AI image generation with PowerPoint slide masters
- AI-assisted research, summarization, and document structuring

Areas of Expertise

Electrical / Telecommunications / Hydroelectric power / Quality assurance (ISO 9001) / Technical translation / PowerPoint / AI

Tools Used

Category	Tools
AI chat	ChatGPT, Claude, Gemini
AI image generation	ChatGPT (GPT Image) , Gemini (Nano Banana)
Material design	Microsoft PowerPoint
Document creation	Word, Excel

Portfolio

You can view my work in detail here.

The portfolio includes:

- ✓ Work samples
- ✓ PowerPoint templates

- ✓ AI use cases
- ✓ Technical materials

In Closing

What I value is not simply using AI, but understanding the subject matter and producing deliverables on that basis.

I welcome projects where quality matters,
projects that call for specialist knowledge,
and long-term engagements.

Please feel free to get in touch.

I will listen carefully to your requirements
and propose the best way forward.
